Please read and understand CLO and SO described in syllabus.

Q1. After studying some concepts of Object Oriented Programming (OOP) of Java in Chapter 6, 7, 9,10,11 of the given textbook, you are required to **develop** a university management system. In the university, there are students studying both graduate and undergraduate courses from the faculty members. The university staff including admission office, account office, exam office and departmental supporting staffs are providing their supports to the students. There are different departments including Computer Science, Electrical Engineering, Management Science, Civil Engineering. There are various class rooms in the university where the classes of different courses are scheduled. The university management system should be developed by following proper steps or algorithm, the UML diagram of the application, and complete executable code. The presentation should also be developed of up to 5 minutes. All the materials the report, the presentation and the executable code should be submitted into CUOnline. Further, the report's hardcopy should also be submitted. The viva and on spot programming will also be asked. It should be developed in a group of size up to 3 students. (CLO-2 /GA(2-4)/Applying):

Note: Rubrics for Evaluation

- UML diagram complete using all the concepts 10 marks
- Runnable code complete using all the concepts 10 marks
- Presentation Slides developed professionally 5 marks
- Presentation and Viva by individual member 10 marks
- Team work and professionalism 5 marks
